

Dummy Medical Report (For Testing Purposes Only)

Patient Name: John Doe

Age / Sex: 34 / Male

Patient ID: JD-45821

Report Date: 12 Aug 2025

Referring Physician: Dr. R. Sharma, MD

Facility: City Care Diagnostics, Mumbai

Clinical Summary

The patient reports recent gastrointestinal discomfort following a completed course of antibiotics prescribed for an upper respiratory infection. Symptoms include altered bowel habits and mild post-meal nausea.

Medication History

Amoxicillin-Clavulanate – 7-day course completed two weeks prior. No other current medications reported.

Laboratory Investigations

Complete Blood Count (CBC): Hemoglobin 14.2 g/dL, WBC 6,800 / μ L, Platelets 2.4 lakh / μ L (all within normal range).

C-Reactive Protein (CRP): 1.2 mg/L (within normal limits).

Stool Examination: Loose consistency, occult blood negative, ova/cysts/parasites not detected.

Impression

Findings do not indicate acute pathology at this time. Symptoms may be temporary and related to recent medication history. Clinical correlation advised.

Recommendations

Maintain adequate hydration, consume easily digestible foods, and monitor symptoms over the next 1–2 weeks. Follow up if symptoms persist or worsen.
